

ALFABET USER GROUP RELEASE 10.3

Karan Khurana

FOCUS OF ALFABET RELEASE 10.3

ENABLE CUSTOMERS' DIGITAL TRANSFORMATION

GLOBAL USER COMMUNITIES ARE GROWING

- Many stakeholders in IT planning and management
- IT portfolio management crosses borders in multi-national corporations
- Think global, act local approach needed to support all users

BUSINESS & IT ARE PARTNERS IN TRANSFORMATION

- IT plays a definitive role in digital strategy creation and execution
- Business and IT need a bi-partisan platform to communicate
- Decision-ready documents needed for top management green-lighting

ACCELERATED INNOVATION NEEDS INTEGRATION

- Informed decisions based on “whole-view” assessments
- Close the gap between strategic planning and operational systems
- Make organizations into agile enterprises – in planning and execution

GLOBAL USER COMMUNITIES ARE GROWING

10.3

GLOBAL USER COMMUNITIES ARE GROWING

EASE OF ADOPTION IN MULTI-NATIONAL ENVIRONMENTS

AUTOMATED DATA TRANSLATION

- Use translation engines such as Google or Amazon
- Translate all standard user interface texts
- Translate into several languages in a single event transaction
- Use ADIF* for bulk changes
- Re-translate to continuously improve translation quality

SPLASH PAGE

- Allow users to compose their own start pages
- Give users the freedom to independently assemble the views they work most often with
- Easy framework for splash page creation

AUTOMATED HELP CONTENT

- Provide context and guidance for the occasional user for the task at hand
- Use any type of content: how-to videos, PPT presentation, links to external website, etc.
- Implemented on object views, customer reports, wizards and cockpits across the whole application

DESCRIPTION

Trading back-bone of our company.

22 Business Supports
The total number of operational business supports for the application.

23 Information Flows
The total number of incoming or outgoing information flows.

28 Local Components
The total number of local components in the application.

4 Outdated Components
Number of outdated components used by application.

Application Diagram

Application Overview Cockpit

Don't show this tip in the future.

An application is a fully-functional integrated IT product that provides functionality to end users and/or to other applications. As such, an application supports the business to accomplish its mission.

Applications operate on a platform made of hardware and software components necessary to run the application.

The application overview cockpit and the other cockpits on this page will give you in depth

Automatic pop-up window

Content explaining the view or the task at hand

BUSINESS & IT: PARTNERS IN TRANSFORMATION

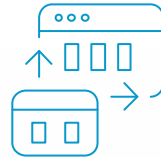

BUSINESS & IT ARE PARTNERS IN TRANSFORMATION

HIGH-QUALITY, MEANINGFUL DECISION-SUPPORT MATERIAL

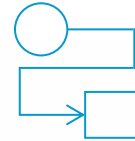

POWERPOINT PUBLICATION ENGINE

- Use PPT's slide master concept to create the presentation design
- Choose diverse layouts for individual slides
- Define rules for populating the layout
- Put datasets, business support matrices, business graphics and more into the publication

ENHANCED VISUALIZATIONS

- Use the **Clustered Rectangular Tree Map** to display 3-level hierarchies in a fitted, nested display.
- Use **Connections in Cluster Maps** to indicate relationships between objects in different cells.
- Use the interactive **Kanban Report** for Agile development, maintaining relationships and status assignment

AD HOC QUESTIONNAIRES

- Create surveys with lots of questions (100+) and with varied answer schemes
- Create pools of questions and combine them into questionnaires
- Mix and match questions with answer schemes
- Embed questionnaires in wizards for easy use
- Change surveys easily

POWERPOINT PUBLICATION ENGINE

POWERFUL INSIGHTS IN AN ATTRACTIVE SETTING

ACCELERATED INNOVATION NEEDS INTEGRATION

BETTER DECISIONS ON HOW TO TRANSFORM IT

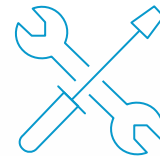

WEBMETHODS TRADING NETWORKS

- Understand your company's trading networks: who is involved and what information flows between partners
- Represent the trading network architecturally for planning and management
- Monitor document transactions to evaluate the quality of the information flow and the relationships with trading partners

MICROSOFT PROJECT INTEGRATION

- Synchronize strategic project portfolio planning with operational project management
- Evaluate *all* projects in the context of corporate strategy and strategic investment
- Feed planned projects in Alfabet into Microsoft Project for operational management and ensure execution follows strategy

JIRA INTEGRATION ENHANCEMENTS

- Synchronize JIRA issues and the Alfabet objects they refer to ad-hoc from the user interface
- Control which objects can be linked to JIRA projects, versions and/or components

EASE OF CONFIGURATION AND USABILITY ARE KEY

EASE OF CONFIGURATION AND USABILITY ARE KEY INCREASED USER PRODUCTIVITY AND ENGAGEMENT

- Editable Class View
 - Multi-editing across a number of objects from the same class
 - Easy editing with combo boxes, in-line look-ahead and memo control
- Visibility & Editability Constraints
 - Configure rules to control visibility and editability of controls in editors/wizards based on user input
 - Use similar rules to control visibility in cockpits based on object properties
- In-place Editing
 - Edit scalar attributes directly in any field in a cockpit
- Re-sizing/Re-ordering of Columns in Datasets
 - Easily adjust column size by pulling on column outline
 - Easily re-order columns using drag and drop
- Support for Arabic
 - Right2Left rendering
